The COVID Risk Meter uses data trends to estimate the current threat posed by COVID in the region on a daily basis.

**What The Weekly Rating Means**

**Very High**

Risk Is High and Approaching Critical

Case numbers are high and hospital beds are filling up. Only leave your home for essential functions: To work at your job, see a doctor, to obtain medicine from the pharmacy or food from the grocery store. Consistently wear masks anywhere that is not your home. Stay away from at risk people and don’t invite anyone to your home who doesn’t live with you. Socially isolate as much as possible.

STAY HEALTHY, STAY INFORMED, STAY SAFE
